How we can help you with NHS Health Checks

The NHS Health Check programme is a national initiative aimed at preventing heart disease, stroke, diabetes, and kidney disease in adults aged 40 to 74.

To support healthcare professionals in delivering this service effectively, NHS Midlands and Lancashire (NHS ML) provides NHS Health Check templates and search packages, designed to streamline patient identification, data collection, and risk assessment.

Accurate data collection is essential for efficient and standardised NHS Health Checks. Our templates enable healthcare professionals to record patient history, lifestyle factors, and biometric measurements, ensuring consistent and structured data entry. Search packages help practices identify eligible patients, manage recall processes, and support accurate payment claims in line with council specifications.

NHS ML has a strong background in NHS Health Check implementation, with expertise in:

- Clinical system integration (EMIS, SystmOne)
- Data quality improvement and NHS compliance
- Supporting councils and GP practices with search and reporting solutions
- Optimising workflows to enhance efficiency and patient engagement.

Why choose MLCSU

Our Data Quality Team has extensive experience in supporting councils and GP practices to implement NHS Health Check initiatives, providing customised solutions that align with local specifications and reporting requirements.

Structured templates for NHS Health Check data entry

Search packages for patient identification and recall

Automated searches for payment claims and compliance

Data quality tools to improve accuracy and reporting

Business intelligence dashboards for programme

Our services

NHS ML provides a comprehensive suite of NHS Health Check solutions, including:

- **NHS Health Check templates** – Easy-to-use templates compatible with EMIS and SystmOne, enabling structured data entry, QRISK3 calculations, and health assessments.

- **Search packages for patient identification** – Custom-built searches to identify eligible patients, ensuring efficient call and recall processes.

- **Search packages for payment claims** – Ensures accurate claims processing based on council payment specifications, reducing administrative burden.

- **Data quality searches** – Helps GP practices identify and rectify coding issues to improve payment claims and reporting accuracy.

- **Granular data searches** – Provides insights into NHS Health Check delivery, supporting health equity audits and demographic analysis.

- **Business intelligence dashboards** – Offers real-time analytics, allowing professionals to monitor uptake, performance, and patient outcomes.

How you'll benefit

Improved efficiency
Streamline NHS Health Check processes with structured templates and automated searches.

Simplified payment claims
Reduce errors in council payment submissions, ensuring accurate reimbursement.

Accurate patient identification and recall
Ensure eligible patients are invited, supporting wider programme uptake.

Better data insights
Use search tools and dashboards to track NHS Health Check outcomes and patient trends.

Compliance with NHS standards
Our solutions align with national and local NHS Health Check reporting requirements.
